

ABSTRACT OF THE DISCLOSURE

A highly-elaborate video previously prepared so as to become tuned with predetermined music is stored as information in a server.

- 5 Information pertaining to the synchronized video is distributed to a terminal from the server. Information about the synchronized video received by the terminal and information about songs of an inserted CD are transmitted to a display screen device and a performance device such that both information items are started at the same start time. The information
- 10 items are displayed and performed, thereby attempting to achieve synchronization. In relation to activities of an artist, an advertisement of an enterprise, and information of a local public body, a video, sound, and music, which are desired to be distributed, are stored in advance in a server as information and distributed in the same manner. Information about
- 15 synchronized videos can be deleted or added one after another.
